

WE CLAIM:

1. A dispensing system for wipes comprising:
a dispenser;
a wiper blade;
wipes, the wipes comprising a contained agent; and
a gap in the dispenser;
wherein the wipes are capable of being positioned through the gap, the wiper blade exerting pressure on the wipes sufficient to moisten the sheet.
2. The dispensing system of claim 1, wherein the wipes have a dry feel.
3. The dispensing system of claim 1, wherein the agent is contained in an emulsion.
4. The dispensing system of claim 1, wherein the agent is contained in microcapsules.
5. The dispensing system of claim 1, wherein the agent is contained in a membrane.
6. The dispensing system of claim 1, further comprising a mounting assembly.
7. The dispensing system of claim 6, wherein the dispenser is secured to a conventional dry bath tissue dispenser and at least one surface by means of the mounting assembly.
8. A method of dispensing wipes from a dispenser comprising:
pulling wipes from a dispenser, the wipes comprising a contained agent;
wherein the pulling results in the dispenser exerting a force on the wipes such that the contained agent is released.

9. The method of claim 8, wherein the wipes have a dry feel.
10. The method of claim 8, wherein the agent is contained in an emulsion.
11. The method of claim 8, wherein the agent is contained in microcapsules.
12. The method of claim 8, wherein the agent is contained in a membrane.
13. The method of claim 8, wherein the dispenser comprises a wiper blade.
14. The method of claim 13, wherein the force is exerted by the wiper blade.
15. The method of claim 8, wherein the wipes are moist after being pulled from the dispenser.
16. A dispensing system for wipes comprising:
a dispenser;
a gap;
a wiper blade associated with the gap; and
wipes, the wipes comprising two portions;
the first portion of the wipes being inside the dispenser; the
second portion of the wipes being outside the dispenser;
the first portion comprising a contained agent; the second
portion comprising a contained agent which is released.
17. The dispensing system of claim 16, wherein the first portion of the wipes have a dry feel.
18. The dispensing system of claim 16, wherein the agent in the first portion is contained in an emulsion.

19. The dispensing system of claim 16, wherein the agent in the first portion is contained in microcapsules.

20. The dispensing system of claim 16, wherein the agent in the first portion is contained in a membrane.

5 21. The dispensing system of claim 16, wherein the second portion of the wipes is moist.

22. The dispensing system of claim 16, further comprising a mounting assembly.

10 23. The dispensing system of claim 22, wherein the dispenser is secured to a conventional dry bath tissue dispenser and at least one surface by means of the mounting assembly.

24. The dispensing system of claim 16, wherein the wipes are capable of being positioned through the gap.

15 25. The dispensing system of claim 16, wherein the wiper blade exerts pressure on the wipes sufficient to release the agent.
